annotation this volume covers six classical authors damianus geminus rhodius hanno sallust themistius thucydides the articles explore the influence of each in the medieval renaissance world followed in each case by a listing brief description of latin commentaries before 1600

highlighting the major economic and industrial changes in the lubrication industry since the first edition synthetics mineral oils and bio based lubricants second edition outlines the state of the art in each major lubricant application area chapters cover trends in the major industries such as the use of lubricant fluids growth or decline of market areas and applications potential new applications production capacities and regulatory issues including biodegradability toxicity and food production equipment lubrication in a single unique volume synthetics mineral oils and bio based lubricants second edition offers property and performance information of fluids theoretical and practical background to their current applications and strong indicators for global market trends that will influence the industry for years to come

this book offers a new framework for comparing experiences of integration regionalization must be reinterpreted as an aspect of modernization modernization unfolding also at the local national and global levels the contributors discuss how and why the different visions of modernity that inform modernization projects encouraged the construction or rejection of regional integration at different times and in different places it starts with an analysis of plans for the economic integration of europe in the aftermath of world war i it shows how integration was identified as the means to modernize the region with a view to helping it overcome political fragmentation and adapt to new conditions of global capitalism it then turns to the debate on modernization unfolding in the era that constituted the formative period of integration for both europe and latin america it analyses examples of the complex interaction between these two different experiences as it extends into the present finally it looks at the social and political actors that promoted integration in the two regions and at the discourse they formulated to do so

the essential how to book on making and using ethanol as an alternative renewable fuel dwindling petroleum supplies and growing environmental concerns are significantly impacting the cost of petro fuel and its infrastructure the search for alternative fuel sources has led to ethanol a gasoline substitute that is already in the marketplace as gasohol and e 85 but large scale production of corn based ethanol is controversial as it threatens the world s food supply there are alternatives however brazil uses sugar cane which is up to six times more productive in energy conversion after the energy crisis of the 1970s there was a lot of misinformation about the cost of individual ethanol production in order to achieve energy independence from gasoline ethanol lends itself to small scale production and especially to cooperative ventures in rural communities often using waste feedstock alcohol fuel is a practical grass roots book that will give readers all the information they need covering every aspect of making and using ethanol for fuel including permitting and planning budgeting and setup sourcing feedstocks finding and building distillation equipment storage and safety practical applications for converting motor vehicles farm equipment and space heating systems the practical user friendly information on basic equipment needs fermentation recipes and distillation designs will be of interest to readers looking for information as well as those ready to make the switch

commercial development of energy from renewables and nuclear is critical to long term industry and environmental goals however it will take time for them to economically compete with existing fossil fuel energy resources and their infrastructures gas fuels play an important role during and beyond this transition away from fossil fuel dominance to a balanced approach to fossil nuclear and renewable energies chemical energy from natural and synthetic gas illustrates this point by examining the many roles of natural and synthetic gas in the energy and fuel industry addressing it as both a transition and end game fuel the book describes various types of gaseous fuels and how are they are recovered purified and converted to liquid fuels and electricity generation and used for other static and mobile applications it emphasizes methane syngas and hydrogen as fuels although other volatile hydrocarbons are considered it also covers storage and transportation infrastructure for natural gas and hydrogen and methods and processes for cleaning and reforming synthetic gas the book also deals applications such as the use of natural gas in power production in power plants engines turbines and vehicle needs presents a unified and collective look at gas in the energy and fuel industry addressing it as both a transition and end game fuel emphasizes methane

syngas and hydrogen as fuels covers gas storage and transport infrastructure discusses thermal gasification gas reforming processing purification and upgrading describes biogas and bio hydrogen production deals with the use of natural gas in power production in power plants engines turbines and vehicle needs
